**PLEASE DON'T PURCHASE PLASTIC FIRE EXTINGUISHER!
THEY CAN NOT BE SERVICED AND MUST BE DISPOSED OF IN 5 YEARS!!! They're cheap
because they're disposable!!!
Our planet isn't!**

Please think of our environment before your print a copy of this form!

**SCO FIRE & LIFE SAFETY PROUDLY SIGNED THE LIVE EARTH PLEDGE JULY 7TH 2007
WE HAVE ANSWERED THE CALL. WILL YOU?**

SCO Fire & Life in an attempt to market our Company in a green way send out flyers, quotes and billings via e-mail to save paper and inks that can be harmful to our environment.

We encourage you not to print them if possible.

We also employ a green billing and reporting systems for all your fire protection needs. We print 1 hard copy of your report on environmentally friendly recycled paper and all our billing as well as extra reports are in electronic/disk form.

Our office uses only recycled paper and ink cartridges to lessen our impact on the planet.

At SCO we are answering the call made by our planet through Live Earth www.liveearth.org to be responsible and environmentally friendly in everything we do and to reduce our carbon based emissions that contribute to global warming. We recycle water used for servicing extinguishers to lower our consumption. We keep our thermostat at 25 degrees in the summer heat and 20 degrees in the winter time. We use hand tools instead of power tools to perform testing and service of fire extinguishers.

We recycle dry chemical powder and parts required for maintaining and servicing your fire equipment. We have reduced 95% of our waste of fire extinguishers parts to just 5%! We encourage servicing your equipment rather than replacing whenever possible to keep the pollution out of the landfills. When cylinders or parts that can't be reused we break those material down and recycle them in a environmentally friendly way reducing waste that would normally go to landfills.

We would like to work with you!

We can help you go green. Our emergency lighting products not only reduce electrical consumption but in most case qualify for rebates* from your local utility.

We are excited to employ alternatives to normal electric power to charge your Emergency lighting systems.

We take away all waste material, cardboard box's, electrical wiring parts, from the job site and we take away your used batteries and out of date equipment or equipment we replace for you and recycle them at our shop.
